Servos

Learning Material for Sensor Technology.

Servo

- maxToArduino4Servo_0.1

1) Only works with old Arduino IDE (023). Doesn't work with new Ard v1.0 or newer. (library read problems).

2) You need to install the megaservo librarie in your documents/arduino folder.

Previous Arduino versions here.

Also you might want to look into using capacitors and resistors if the servo is not made to operate on 5V (arduino operates on 5V if connected to PC).

- simple examples

Examples with servos and pots
